

# Connecting the Ascend™ Smart In-Wall Timer

## 4 Options Put Contractors and Homeowners in Control

### Getting Started with Ascend

Syncing Ascend with our complimentary mobile app is quick and easy. It helps contractors speed up installations while proving lasting benefits to homeowners. Before pairing a new timer, be sure to complete the following steps:

- Visit Google Play or the App Store and download the Ascend Smart Timer app by Intermatic to any smartphone or tablet.
- Launch mobile app for instruction on initial connection and setup.

### Communication Options

- 1. Peer-to-Peer (Access Point):** Used for initial setup, Access Point is a secure link that allows the timer to communicate directly with any smartphone or tablet without having a traditional local area network (Wi-Fi). Contractors will find a timer-specific Access Point network (e.g., "7DT-XXXXXXX") under their mobile device's list of available networks when in close proximity to the timer.
- 2. Wi-Fi Mode:** Primarily used by the homeowner, Wi-Fi Mode connects Ascend to any active local area network (commonly referred to as Wi-Fi). Once synced, it allows users to control the timer through the Ascend Smart Timer app from anywhere within the local area network's reach. Homeowners can quickly see all timers connected to their local area network and switch between timers to make updates.
- 3. Remote Access via Intermatic Connect (Cloud):** Remote Access lets homeowners control their timers from anywhere they have cellular coverage using the Ascend Smart timer app. This provides true mobile access and allows users to update programs and make manual schedule adjustments at any time. Homeowners must create an Intermatic Connect Cloud account (or log in to an existing profile) and register timers to their account to access this feature. Timers are also required to remain in Wi-Fi Mode.
- 4. Voice Control:** Voice Control allows homeowners to control their Ascend Smart In-Wall Timer with Amazon Alexa. Alexa is Amazon's cloud-based voice service, otherwise known as a voice assistant platform. Alexa is the only voice assistant platform Ascend is currently compatible with; however, other platforms will be added in the near future.

### Helpful Tips

- › The communication symbols on the Ascend timer can help verify a connection is established and that you're updating the correct device.
- › During initial setup, label timers with user-friendly names, such as "Hallway" or "Porch."
